# **Projects**

## **Full Stack Apps**

## Boost me

Boost Me is a donation platform that was built for the 4H community. It provides a solid user integrated experience for financial backing. Due to its malleable data structure, it was created with an emphasis on repeatable builds in mind

**Link:** https://boostme-0421.herokuapp.com/ **Repo Link:** https://github.com/quaylas/boostme

## Technologies used:

- MongoDB, Express.js Server
- React
- User Login, and Authorization
- JS Web tokens
- Bycrpt Password Hashing
- Graph QL: Relations, Queries, and Mutations
- Stripe Checkout System

## Readviews

Readviews is Project with the idea of creating a interactive website for book reviews. It allows users to sign up and login and post reviews for books they have read. They can also explore other users' reviews. It also lets users intact with each other's posts through comments and upvotes.

**Link:** https://readviews-022021.herokuapp.com/ **Repo Link:** https://github.com/quaylas/readviews

## <u>Technologies used:</u>

- Express.js, sequelize Server
- User login, with Sessions
- User Posts, and Comments
- User Upvote System
- Password Hashing
- Sass and Bulma Layout with Handlebars

# **Projects**

## **Creative Ui Apps**

# Graphic Designer's Portfolio

This is a custom portfolio I built for a Graphic Design graduate. Its a React application and uses components for easy navigation. It also uses react-bootstrap's column system for its lay out. I built a custom modal layout for this app that utilizes reacts state management for multiple view options.

Repo Link: https://github.com/tonganknight/Katie-Portfolio

### Technologies used:

- Interactive Art Gallery
- React Application
- Custom built modals
- Mobile First interface

# **Leftovers**

I built this to help users see required ingredients for recipes before going to a recipe site This app builds and executes API calls from a user search and builds results which then users can choose to locally store in a favorites list.
